

ChamelloT

An Agnostic Hardware Operating
System Framework for Reconfigurable
IoT Devices

IDC Forecasts Worldwide Spending on the Internet of Things to Reach \$745 Billion in 2019, Led by the Manufacturing, Consumer, Transportation, and Utilities Sectors

EGHAM, U.K., August 29, 2019

Gartner Says 5.8 Billion Enterprise and Automotive IoT Endpoints Will Be in Use in 2020

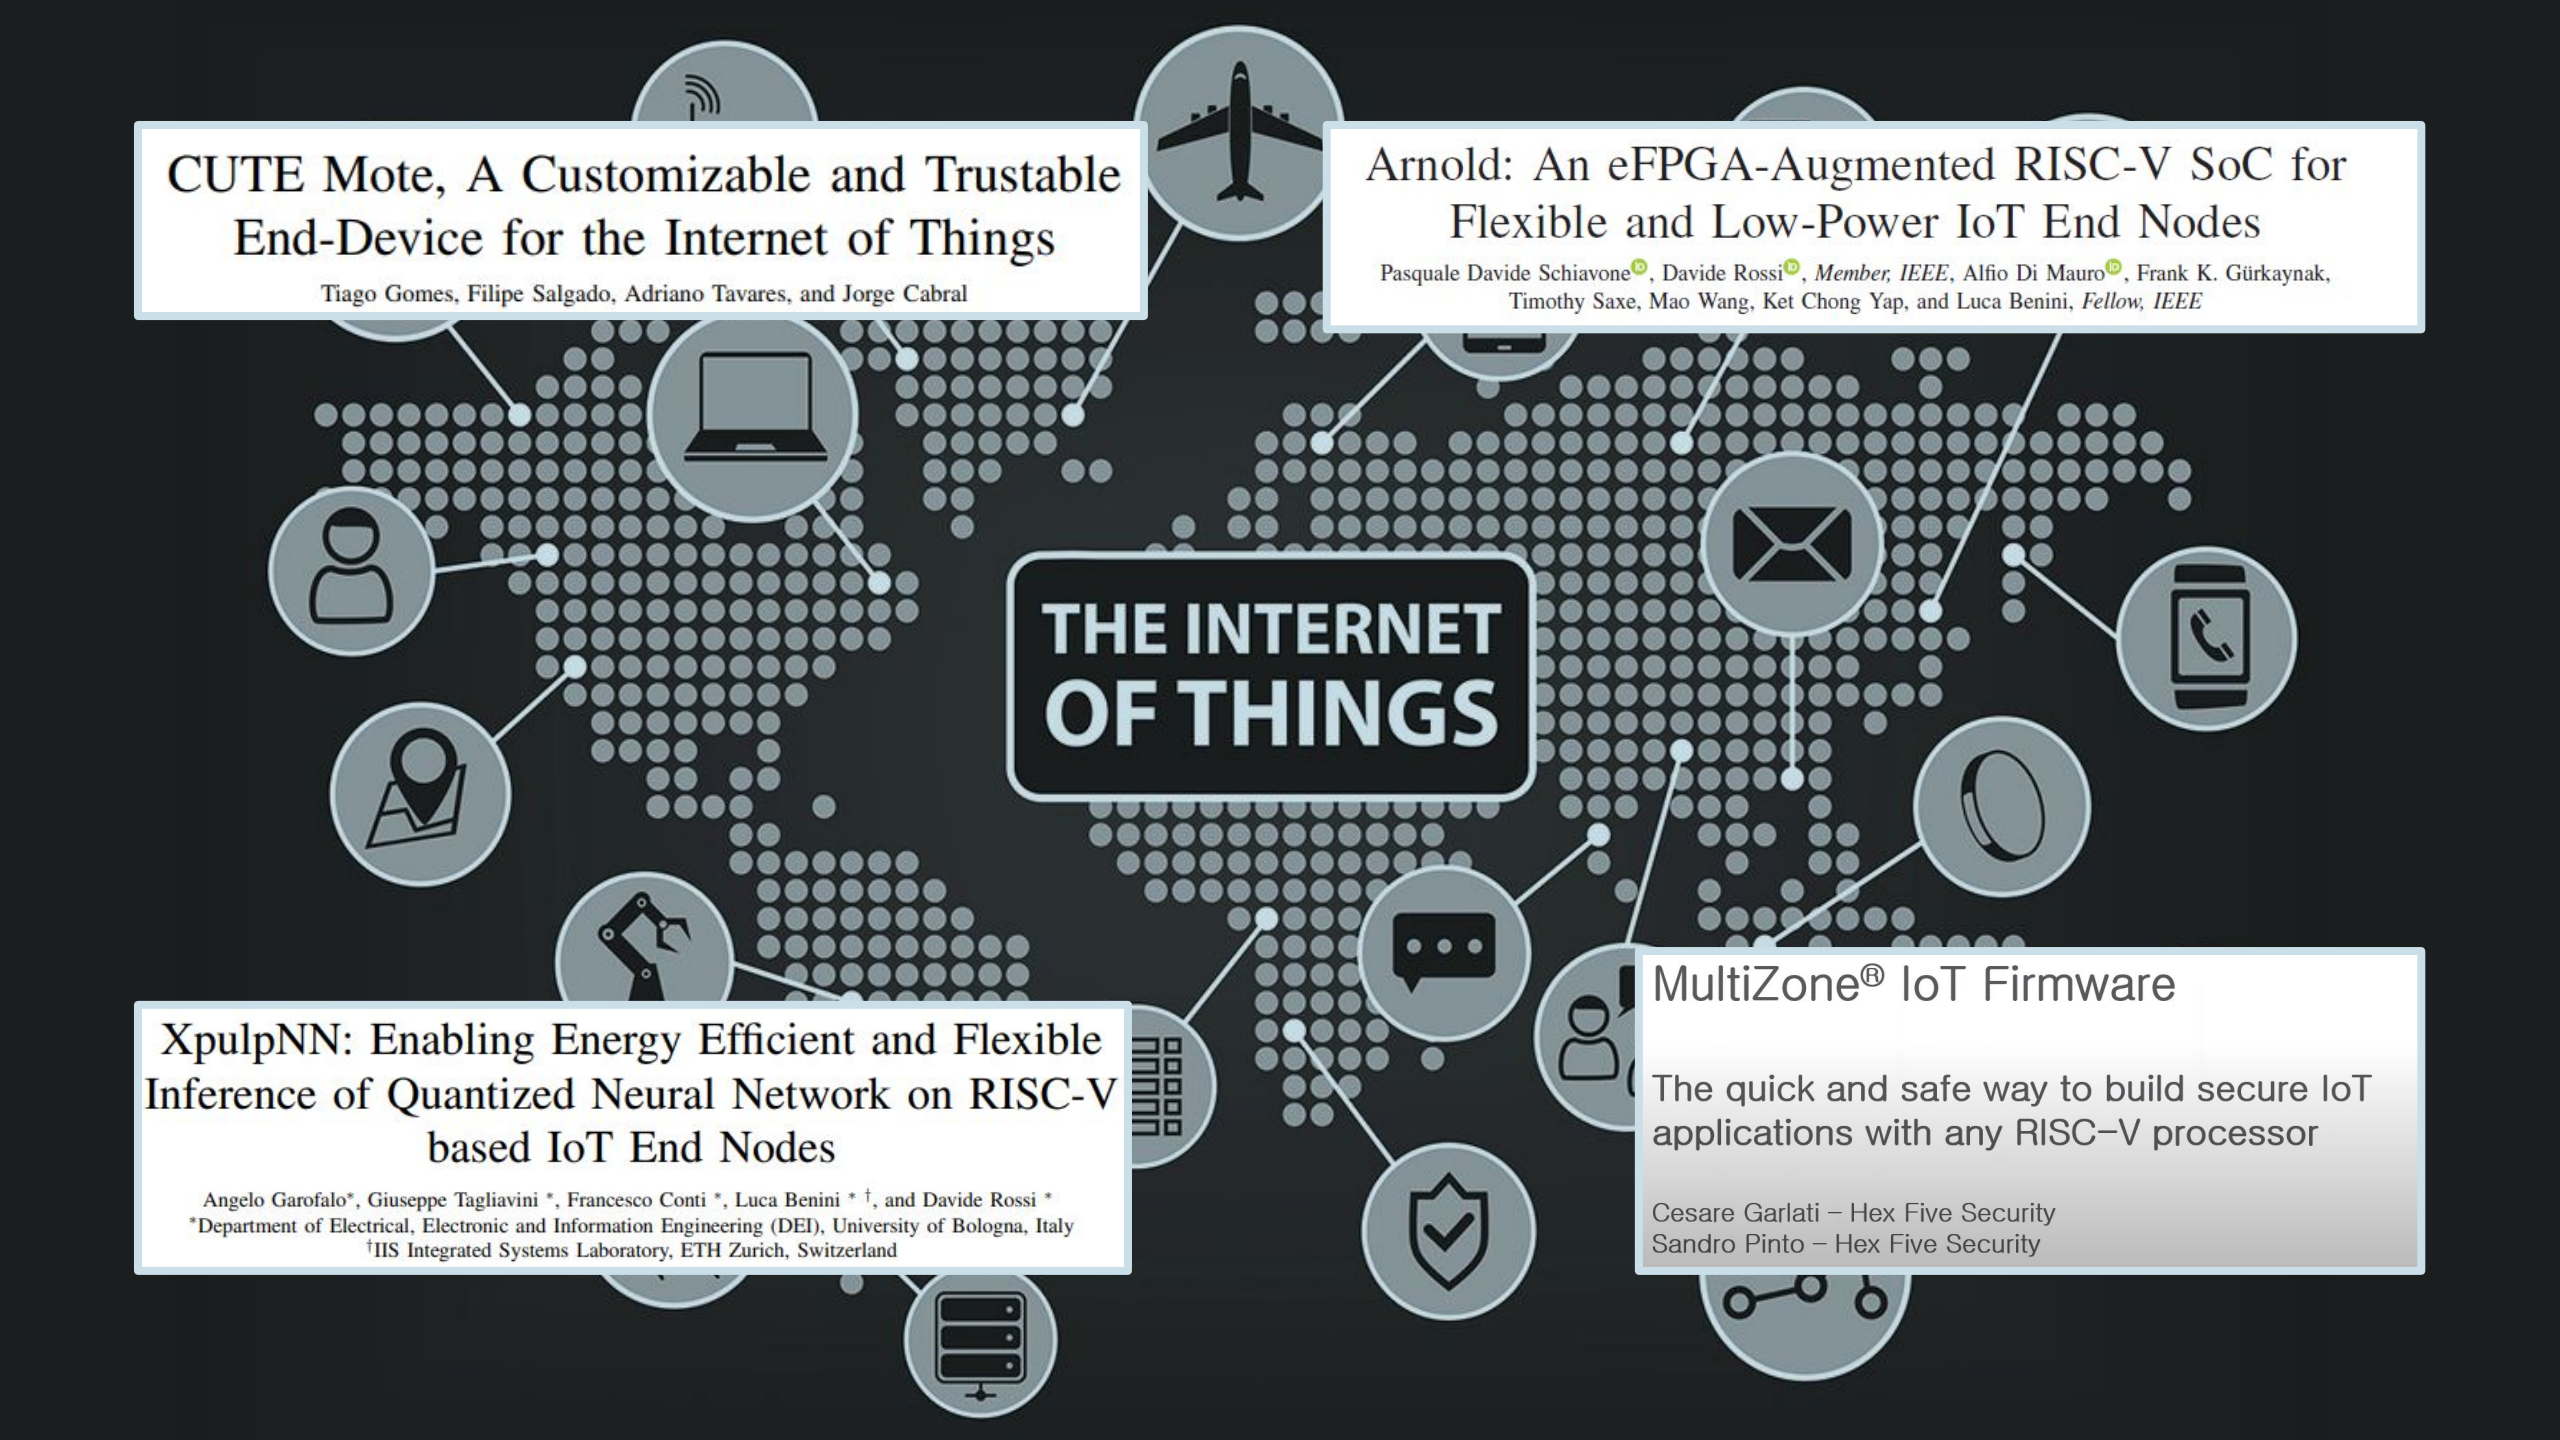

THE INTERNET OF THINGS

Annual Production of IoT devices

Popular Internet of Things Forecast of 50 Billion Devices by 2020 Is Outdated

Warning: All projections for the Internet of Things are subject to change

The background features a stylized world map composed of a grid of dots. Various IoT-related icons are scattered across the map, including a Wi-Fi symbol, an airplane, a laptop, a person, a location pin, a robotic arm, a server rack, a speech bubble, a shield with a checkmark, a smartphone, a coin, and an envelope. These icons are connected by thin white lines, suggesting a global network.

CUTE Mote, A Customizable and Trustable End-Device for the Internet of Things

Tiago Gomes, Filipe Salgado, Adriano Tavares, and Jorge Cabral

Arnold: An eFPGA-Augmented RISC-V SoC for Flexible and Low-Power IoT End Nodes

Pasquale Davide Schiavone[✉], Davide Rossi[✉], *Member, IEEE*, Alfio Di Mauro[✉], Frank K. Gürkaynak, Timothy Saxe, Mao Wang, Ket Chong Yap, and Luca Benini, *Fellow, IEEE*

THE INTERNET OF THINGS

XpulpNN: Enabling Energy Efficient and Flexible Inference of Quantized Neural Network on RISC-V based IoT End Nodes

Angelo Garofalo*, Giuseppe Tagliavini *, Francesco Conti *, Luca Benini *[†], and Davide Rossi *

*Department of Electrical, Electronic and Information Engineering (DEI), University of Bologna, Italy

MultiZone[®] IoT Firmware

The quick and safe way to build secure IoT applications with any RISC-V processor

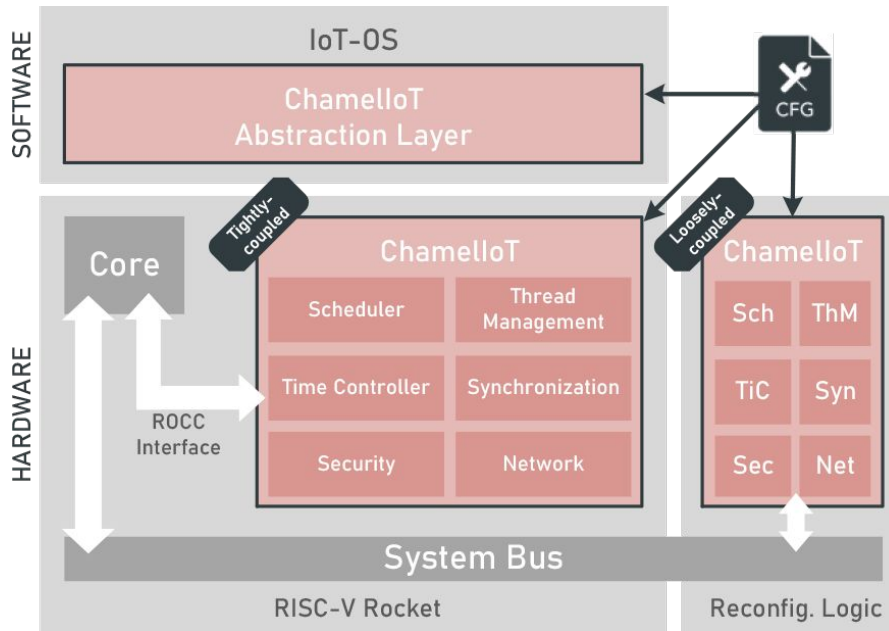

Cesare Garlati – Hex Five Security

Sandro Pinto – Hex Five Security

CHAMELIOT

ChamelloT's goal is to provide a framework to accelerate IoT OSes in hardware.

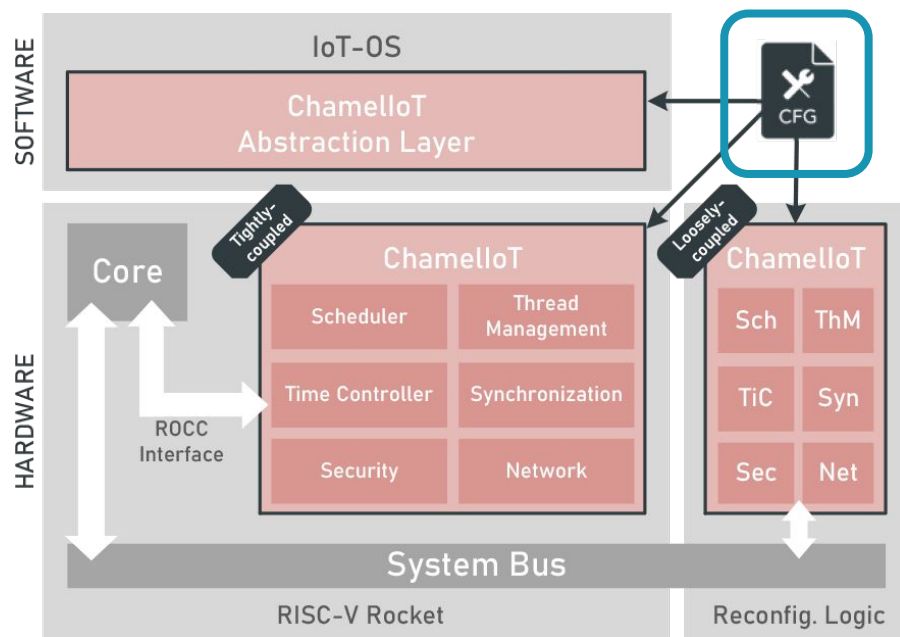

- RISC-V -based OS accelerator (tightly- and loosely-coupled)
- IoT OS abstraction layer
- Configuration Tool

CHAMELIOT

ChamelloT's goal is to provide a framework to accelerate IoT OSes in hardware.

- RISC-V -based OS accelerator (tightly- and loosely-coupled)
- IoT OS abstraction layer
- **Configuration Tool**

MSCTHESIS

ChamelloT's Configuration Tool

Goals

- Develop an Eclipse-based tool to allows the user to build the full system (Hardware accelerator + IoT Operating System)
 - Allow the configuration of all ChamelloT's components
- Integrate the build system of the three supported OSes

Competences

Learn to develop Eclipse plugins

Understand Chisel and ChamelloT's hardware accelerator

Understand the three different OSes and their build systems
